EDUCATION

Master of Science, Statistics, Data Science concentration

January 2024- May 2025

California State University, East Bay.

Bachelor of Science, Statistics, Data Science concentration

August 2022 – December 2023

California State University, East Bay. GPA: 3.97

- Scholarships: Justin Randle Scholarship, PALiSaDS Scholarship

EXPERIENCE

Research Assistant / Data Analyst

August 2024 – Present

California State University, East Bay

- Conduct statistical analysis for the *Next Generation Science Standards* research team, evaluating the effectiveness of learning objects in supporting K-12 Science and Engineering education.
- Perform qualitative and quantitative analysis on data collected from five universities to identify patterns in student learning outcomes.
- Develop interactive data visualizations and dashboards to present research findings, enhancing accessibility and interpretation for educators and stakeholders.

Student Assistant

January 2024 – May 2024

California State University, East Bay

- Developed marketing materials, including brochures and presentations, to promote the statistics department and attract new students.
- Analyzed student engagement data to inform targeted outreach strategies and improve enrollment.
- Created visually compelling content to communicate key program statistics and showcase the department's strengths.

Office Manager Assistant- Apprentice

June 2020- February 2021

Bamboo Advance Beauty College, San Leandro

- Managed and updated information related to theoretical questions for students and teachers.
- Assisted in administrative tasks, maintained accurate records of both student and faculty with "Time logged".
- Using MS Office such as Word, Excel, Power Point to edit and manage class lessons.

PROJECTS

Sentiment Analysis of American Airlines Reviews (Python)

May 2024

- Collected and analyzed 5,940 customer reviews from www.airlinequality.com using web scraping techniques to assess sentiment and recommendation trends, and conducted extensive data preprocessing, including stop-word removal, tokenization, and text normalization, to improve model performance.
- Applied multiple Natural Language Processing (NLP) techniques, including TF-IDF, word embeddings, and BERT, to classify customer sentiment.
- Achieved 98.81% AUC and 84.01% F1-score using BERT, demonstrating its effectiveness in sentiment classification compared to traditional NLP methods.

Raisin Classification Analysis (R)

April 2024

- Processed 900 raisin samples with 7 feature measurements, applying logistic regression with variable selection and transformation modeling for classification (*Besni* vs. *Kecimen*).
- Assessed model performance using AUC (93.39%), accuracy, and AIC, comparing results with random forest and decision tree for effectiveness.
- Found logistic regression to be the most reliable model, outperforming other methods in classification accuracy and model efficiency.

SKILLS

Programming languages: R, Python, SQL

Tools: Jupyter Notebook, Google Colab, RStudio, Tableau, MS Office, Google Workspaces

Others: analytical thinking, problem solving, data visualization, communication skills, attention to detail, time management, collaboration, data storytelling, critical thinking
